# ACS Spring 2026 | CHAS and TOXI Symposium: **Chronic Toxicity in the Lab**

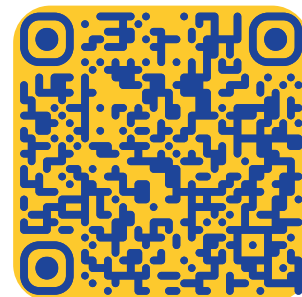

*Organized by the UNC-Chapel Hill Joint Safety Team  
Co-Sponsored with Committee on Chemical Safety and Division of Toxicology*

**March 22-26, 2026  
Atlanta, GA**

**Overview:** This symposium will discuss how chemists can protect themselves from hazards that do not resolve at the end of the workday but rather accumulate and increase in risk with time. We hope to hear from a variety of graduate students and professionals to examine what different approaches industrial and academic labs take when training new researchers to recognize and handle these toxins to minimize long term exposure or health risks.

Abstract submission deadline  
is **Monday, September 29th!**
